---

Hello, please I am having problems merging the 2003 PR, KR AND height and weight (HW) file for Nigeria into one dataset in STATA. please, could you help me with the code or dofile on how to merge these 3 datasets for into one in Stata? thank you very much. I need to merge them because I need the WHO z-scores for the children which are not available in the KR datasets and also there are some variables that have a more detailed response in the PR datasets than in the KR. thanks a lot.
