---

Hello,

I am working with DHS 2013, Nigeria data set. I am having trouble linking the parents education level with the children from the household member recode. How do I identify the parents that have children aged 5-15 years.

I have already generated a new variable for mother's age and father's age using the mother's line number and father's line number.

i.e

```
sort hhid hvidx
```

```
>
```

```
> Next, generate variables with the mother's and father's age.
```

```
>
```

```
> . by hhid: gen mage = hv105[hv112]
```

```
> . by hhid: gen fage = hv105[hv114]
```

Thank you.
