Subject: Migration and fertility Posted by Saima on Tue, 03 Nov 2015 16:23:13 GMT View Forum Message <> Reply to Message

Hello all,

I am using Pakistan Demographic Health Survey 2012-13 to see fertility differentials in migrant and non-migrant households. To this, I am looking at children ever born as completed fertility measure. However, children ever born is an individual level variable whereas migration questions are at household level. Please guide me how to solve this problem.
