I am not able to correctly identify the variables that one can use for the table number 11.16 and 11.17 , as reported in the DHS 2019-20, national report for India.
Please help

regards
Lincoln

Following is a response from DHS Research & Data Analysis Director, Tom Pullum:

Those tables are based on survey-specific questions and variables from the household survey. In the PR file, look for sh54-sh57. Two of these variables, sh55 and sh57, appear as sets of variables with letters a, b, etc. To find those variables, I went to the PR file (because the table titles refer to household members) and entered "lookfor care". That strategy is often the easiest way to locate survey-specific variables.
