Good morning,

I am trying to find out which assets / HH characteristics were used to calculate the wealth index for the Tanzania 11/12 AIS/MIS. I am specifically interested to know if ownership of an insecticide treated net, and household wall and ceiling types were included; this will affect whether I used the dataset's wealth index variable or create my own for analysis of various equity issues around malaria parasitaemia.

Thanks a lot  
Kate

Dear Kate,  
Here is a response from one of our experts, Dr. Shea Rutstein:  
Attached is a spreadsheet with the variables used for the Tanzania 2011 AIS/MIS Wealth Index. Possession of bednets is never included in the wealth index but types of materials for walls, floors and roofs always are.
