I am working with DHS 2011 data set for Nepal. On the survey questionnaire, I see questions related to migrant members, their current destination, their age and reason for migration. However, I am not sure which file contains the data on these values and what variables these questions correspond to. I would really appreciate it if you could give me some direction in terms of understanding how migration information is stored in the DHS data set for Nepal.

Thanks!

I figured it out. I found the required information in the Individual recode documentation. Thanks!
