Dear all. I am Freddy Llerena from Ecuador. I am writing the final report for the last DHS from Ecuador (2012). I have done almost all calculations, but there are a few indicators that I could not estimate. So, Could you share a syntax (SPSS, STATA, or other), in order to estimate postpartum amenorrhea, insusceptibility and postpartum sexual abstinence. On the other hand, do you have a code for measure infant (child, and other) mortality. Both from DHS data set.

Thanks and kind regards.

We have only done one survey in Ecuador, and that was in 1987. We did not do a 2012 DHS in Ecuador, so you should contact the organization that implemented the survey.

Thanks
