I am new to this forum. i would appreciate if someone could tell me step wise procedure to find Infant and Child mortality as done in DHS report for Pakistan.
I observed many persons asking for do file in STATA regarding the same query. Even if SPSS do file or procedure mentioned would be highly appreciated.
Best Regards

Dear User,
Before we can help you, can you please be more specific about what you have already tried and what you are trying to accomplish? Maybe you can share your existing code. Other users may be able to help once they see your code as well. Thank you!
