HELLO,

Can someone help me out to calculate Under five mortality for India country (NHFS-4 data). I am trying to reproduce results as per report, but failed.

Please let me know the variables to be used in KR file, to calculate mortality rate.

*tried

gen UR5=0

replace UR5=1 if b7<60

tab UR5 [iw=weight]

UR5 shows 44 per 1000, but report shows 50 per 1000.

Thank you
