Dear DHS Experts,

I want to replicate the trends in pregnancy-related mortality for 2005, 2011, and 2016 Ethiopian DHS. I know that the IR datasets is the appropriate file. I've read "Guide to DHS Statistics DHS-7" on how to perform the calculations. But I am not completely aware on how to construct the required commands using Stata to arrive the real outputs. I would appreciate your usually guidance you may provide for this. Thank you so much in advance.

Best regards,

---
