
Subject: How to calculate 'households with at least one ITN'

I have been unable to reproduce the figures in the Liberia 2011 MIS for households with at least one ITN.

The DHS report shows 68.0% for U5 and 77.4% for pregnant women as % who slept under and ITN among households with at least one ITN. I can't figure out this denominator. As far as I can tell I need to use variable HML10, but it does not seem to be correct.

Is there a variable other than HML10 I should be using to reproduce the DHS figures?

Thanks for any advice out there!

Deirdre

Here's a response from one of our experts, Shawna Kelly:

HML10 is referencing the section RECHML: Malaria: By Mosquito Bednet. To reproduce the information in table 3.9 of the final report, you'll need to use variables in the section RECHMH Malaria: By Household Member and RECH1: Household schedule. Instead of HML10, you'll want to look at HML12.

Dear User,

I am not a programmer but I looked through some of our programs to create the table on Use of mosquito nets by pregnant women. Look through this. I think it might help identify the variables and denominators you need to use. Note: T1205 is the table name. V102w through total are the row variables. Col1205a+col1250b are the column variables. These are all working variables but you can get an idea of where they came from. For example V102w comes from V102 Type of residence (urban, rural). Our Standard Recode Manual

http://www.measuredhs.com/pubs/pdf/DHSG4/Recode6_DHS_22March 2013_DHSG4.pdf and our Guide to DHS Statistics http://www.measuredhs.com/pubs/pdf/DHSG1/Guide_to_DHS_Statistics_29Oct2012_DHSG1.pdf should be of some assistance as well.

```
crosstab float(1) t1205 v102w+v101w+v106w+v190w+total col1205a+col1205b
      exclude(colzero,rowzero,totals,percents,specval)
```

```
      title( "Table 12.5 Use of mosquito nets by pregnant women", "",
            "Percentages of pregnant women age 15-49 who, the night before the survey, slept under
a mosquito net",
            "(treated or untreated), under an insecticide-treated net (ITN), under a long-lasting
insecticidal net (LLIN)",
            "and under an ITN or in a dwelling in which the interior walls have been sprayed against
mosquitoes (IRS) in the",
            "past 12 months; and among pregnant women age 15-49 in households with at least one
ITN, the percentage who",
            "slept under an ITN the night before the survey, by background characteristics, country,
2011" )
```

```
stub( "Background Characteristic" );
```
