I am currently working on a project for the World Bank looking to find Wealth Quintile data for Nigeria, Tanzania, and Zambia to help with analysis on an on-line web mapping application. I don't have access to SPSS, and I'm not a statistician, but I'm hoping there may be an easy way to download the Wealth index by some subnational unit (province/state?) for these countries. Does anyone know if this is possible? I didn't see it through the spatial <http://spatialdata.dhsprogram.com/home/> site.
