D'r Trever,

I am actually trying to develop some binary variable as below:-

Var1=If still birth=1 and 0 otherwise.

Var2=If miscarriage=1 and 0 other wise.

Var3=if Abortion=1 and 0 otherwise.

and a multinomial response variable as below:-

Var4=Livebirth=0

Var4=Miscarriage=1

Var4=abortion=2

var4=stillbirth=3.

Above outcome is explained in PDHS2013;Chapter Fertility; Page 80 Table 5.15. It is presented there as Pregnancy outcome.

S228 is not developed for Pakistan.

What would be its alternative in PKIR61FL file.

Thanksyou and regards,
Waqas Imran
