Currently the reshaped file providing the records of 57688 (unweighted) and 56748 (weighted by wt=v005/1000000) pregnancies.

Currently there are 14350 pregnancies ending in five years preceding the survey in Table 5.15; page 80; Chapter Fertility; PDHS 2013.

How can i achieve 14350 pregnancies?

Thank you.
