Thanks for the reply. Most helpful.

If I follow the suggestion below and eliminate NW then I'm not denormalizing and creating the country specific weight (CSW) that I thought was the recommended process for pooled surveys? Did I miss something obvious?

Thanks again.

Carrie

```
gen wt= v005/1000000
```

```
egen strata=group(v000 v025 ADM1_CODE) // strata also includes the survey (identified by v000)
in the group command
```

```
egen v001r = group(v000 v001) // cluster also includes the survey in the group command
```

```
svyset v001r [pw=wt], strata(strata) singleunit(centered)
```

```
svy: tab ADM1_CODE
```
