
Subject: Question regarding NFHS variable definition

I am working with the 1998-9 DHS data set from India. I am interested in the operational definition of the variables urban and rural (HV025). I have noted the definition of HV026 (size of place of residence) specifies large cities and small cities but does not define town and rural/countryside. Is there a working definition relative to density/sq km or some other working definition?
