Subject: Re: Quintile cutoffs - weighted and unweighted Posted by k322a on Tue, 28 Jun 2016 14:18:32 GMT View Forum Message <> Reply to Message

Hi,

Hope to know if you managed to solve this? I am also having issues replicating the quintile (cutoffs). This is my code for the 2010 Tanzania DHS -

xtile _5=hv271 [pw=cond(hv012==0,hv005*hv013,hv005*hv012)], n(5)

. ta _5 hv270

5 quantiles of hv271	; Poor	V est P	Vealth ii oorer	ndex Middle	Richer	Riches	st Tot	al
1 2 3	1,889 0 0	93 1,802 0	0 12 1,711	0 0 0	0 0 0	1,982 1,814 1,711		
4 5	0 0	0 0	188 0	1,841 221	0 1,866	2,029 2,087		
Total	1,889	1,89	951,	911 2	 2,062	1,866	9,623	

Any help would be much appreciated.

Kerry
