Hello again,

Apologies, I made a mistake when I confirmed that I am using the PR file because I am not. I am using the HR file, hence I am getting the subscripts. However, I think I do need to use the household file because I will be needing data on the level of the household.

I resolved the error 5132 in SPSS by using another syntax, and this worked. Now I can merge the HR file with the KR file and this seems to have worked!

No further questions at this point..

Thanks for your help!

Regards,
Rachel
