Subject: DRC 2013/2014 HIV Data
Posted by jessi.petz on Mon, 18 Jul 2016 10:13:39 GMT

Hi there,

Reading through other forum posts I've noticed recomendations for merging the HIV dataset to the women's dataset using HIVNUMB HIVCLUST and HIVLINE variables. These variables appear not to exist in the DRC hiv dataset. Are there other variables I would be able to match on? I'm specifically need to merge the HIV data to the dataset containing the IPV module.

Thanks
