The name of the new variable is rweightCH. I am not getting the line you prescribed. Just this error message:

>Warning # 3211

>On at least one case, the value of the weight variable was zero, negative, or  
>missing. Such cases are invisible to statistical procedures and graphs which  
>need positively weighted cases, but remain on the file and are processed by  
>non-statistical facilities such as LIST and SAVE.

When I run a frequency table I get the numbers below. As you can see, there are no missings.

Statistics  
rweightCH  
N Valid 8395  
Missing 0

Anything else you can think of that might cause this error?

Thanks!
