Following is a response from Senior DHS Stata Specialist, Tom Pullum:

BMI is measured in units of kilograms divided by (meters squared). For example, if someone is 2 meters tall (6 ft. 6.74 inches) and weighs 100 kg (220.462 pounds) then their BMI is  $100 / (2 \text{ squared}) = 100 / 4 = 25$ . See [http://www.nhlbi.nih.gov/health/educational/lose\\_wt/BMI/bmic alc.htm](http://www.nhlbi.nih.gov/health/educational/lose_wt/BMI/bmic alc.htm), for example.
