---

I am trying to locate the variables used to create tables 16.3 (Consultations ambulatoires et raison de recours aux soins, p.277) and 16.5 ( Hospitalisations et raison de l'hospitalisation, p.281) from the 2013-2014 DHS final report for DRC. I thought that the variables within these sections came from the PR datafile, incorporating SH206, SH214, SH226, SH230, and SH234. From the tables, it seems that individual women's observations are included in these variables, but I'm unable to complete any cross tabulation with reasons for seeking care and individual women's variables such as age (HA1) or BMI (HA40).

My aim is to examine associations between certain reasons for seeking care and characteristics of individual women - this seems possible, given tables 16.3 and 16.5. If anyone can provide guidance on how to find/use these variables to accomplish my aim, I would appreciate any assistance!
