Subject: Unable to find recode values

Hi, I am working with the Mozambique 2011 datasets. I've downloaded the recode manuals and the Mozambique final report, but there are variables in the datasets that I can't seem to find their code meanings anywhere. For example variable HV228 = number of children that slept under a mosquito bed net and the codes are 0 - 3, but nowhere can I find what these numbers stand for. Also there are different values with the same meaning: HV228 and V460, both say number of children that slept under a bender the night before, but the numbers don't match each other? Any help with these issues would be greatly appreciated. Thanks.
