Hi Trevor,
I was trying to generate a file of pregnancies using the Pakistan 2012-13 DHS and have replicated the code you provided in this thread using IR data but have also restricted to all pregnancies in the five years preceding the survey. I have pasted below the summary of pregnancy outcomes I get and additional code i ran. When I look at only pregnancies of 7 months or more I still get some miscarriages included and the number of stillbirths does not match what is in the DHS report (387 instead of 412). Any advice on what i might have done incorrectly or am missing? Thanks

keep if s220c > v008-60

tab pregoutcome [iw=v005/1000000]

```
pregoutcome |    Freq.     Percent      Cum.
------------+----------------------------------
 Live birth | 11,977.381     83.47      83.47
 Stillbirth | 399.217658      2.78      86.25
   Abortion | 247.508767      1.72      87.98
Miscarriage | 1,725.5345     12.02     100.00
------------+----------------------------------
      Total | 14,349.642     100.00
```

ta pregoutcome if s227 >=7 [iw=v005/1000000]

```
