Thank you Bridgette for your response. Yes I have been able to match the numbers in table 3.1.
However I have been unable to match the numbers in table 2.14. Maybe am not doing it correctly.
I am using SPSS and here is the syntax I used:
*SELECTING MEMBERS OF AGE >=5.
COMPUTE filter_$=(HV105 >= 5).
VARIABLE LABELS filter_$ 'HV105 >= 5 (FILTER)'.
VALUE LABELS filter_$ 0 'Not Selected' 1 'Selected'.
FORMATS filter_$ (f1.0).
FILTER BY filter_$.
EXECUTE.
*SELECT VALID CASES IN THE VARIABLES SH29 SH25 SH27 SH24 SH26 SH28.
COMPUTE filter_$=(NVALID(SH25) and NVALID(SH29) and NVALID(SH27) and NVALID(SH24)
and NVALID(SH26) and NVALID(SH28)).
* DISTRIBUTION OF HOUSEHOLD MEMBERS OF AGE FIVE YEARS AND OVER BY THE
DEGREE OF DIFFICULTY ACCORDING TO FUNCTIONAL AREA.
FREQUENCIES VARIABLES=SH29 SH25 SH27 SH24 SH26 SH28
  /ORDER=ANALYSIS.

With this analysis i got a total number of individuals of 36585 instead of 35,226 as shown in table
2.14.
I will also appreciate if am shown how to construct the stratum variable using SPSS.
Thank you.
Nicholas.
