Subject: Adult Mortality based on Orphanhood Posted by Stephen2703 on Tue, 13 Sep 2016 01:41:07 GMT

Now I'm working with Indonesia 2012 survey data in order to estimate adult (maternal) mortality. The method I'm working with is indirect and based on orphanhood information. Is there any recommendation what dataset recode I must use? What variables that I must consider in that dataset recode?

Thanks, Stephen
