Hello,

In the 2005 Rwanda men's survey datafile (RWMR41FL), I find three variables sm213m sm213y and sm213y related to the "date of the birth of the last child".

I think there is a mistake in the label, because I do not find any question on the date of birth of the last child in the questionnaire (there is one on age at first child), and the distribution of this variable is strange.

Could someone from DHS have a look at these variables in the RWMR41FL data file and let me know to which question they correspond ?

Thank you,

Best regards,

Bruno
