Dear

i want to use cesarean section as my outcome variable and that is M 17 i want to know if i use BR files would it be enough for all variables? OR should i merge any file?

i am confused as i saw a lot of same variables in the same files like v102 and v 025 both are for type of place of residence, similarly v101 and v024 both for region....which one i have to use?

my last question is why results are so different from sas spss and stat compiler using the same data files?

Thank you
