Dear DHS Experts

Thank you very much for quick and gentle replies, i have some more questions as i am new in DHS so i am sorry to bother you again and again but your answers are very valuable to me as they are making my research easy thanks again.i have these questions:

1.In PDHS 1990-91 BR files the wealth index variable V-190 is not listed from which file i can use that from household?

2. How to merge the file in this case how do i know i am using the wealth index of same women whose other variables i am using?

3. If i use IR files there are a lot of choices in my desired variable C/S like M -17-1, 2, 3,..... I think they are for all births, i am working on last birth so which one is showing the last birth? SPSS and SAS results are same, but both of them are different from stat compiler....why stat compiler show different results?

Regards and again thank you very much.
