Dear Sir,

Thank you very much for reply, and i am sorry again to ask so many questions. I have only query now....as far as i understand after reading DHS docs the BR file is the part of IR file having a separate record of birth histories if so, the results should be the same after running the same variables in both files. For example:

V024(Region) VS v208 (Births in last 5 yrs) should be the same in IR files and BR files but its not i tried many times but the data in both files gives different results...why?

Thank you in advance and Best Regards.
