Following is a response from Senior DHS Stata Specialist, Tom Pullum:

Quote:Before I try to match this myself, I want to suggest that you try to get a match using the PR file rather than the KR file. This is the most likely problem: all the children in the household are included in that table--not just the children whose mothers are in the household, i.e. the children in the KR file. Can you let me know whether that takes care of the problem?
