Hello,

Yes, thank you. There are skips to indicate whether section 1 was observed (scd100) and whether section 2 was observed (scd200). So the "no" response to either of these questions indicate that the section was not observed. I'm curious if there is any information as to why certain sections were not observed. For example, 149/626 did not have section 1 observed, but did have section 2 observed. Is this because observers missed the first part of the labor or for another reason? I'm trying to determine the source of the missingness.

Thank you!
Stephanie
