Hello all,

I am using the Individual Recode 2011 Uganda DHS data set in Stata, and have encountered a very high number of missing values (90-100% of the values) for the variables v023, v024, v101 and v139. Is there another variable that contains the region/district values? My goal is to make a "stratumid" variable from v025 (urban/rural) and region.

Thanks,
Jack
