Actually in NFHS 1 there is information for children born in the four years preceding the interview.
Using the Individiual Recode file, you can calculate the births in the last 4 years as follows:
gen kids = 0
foreach b of var b3* {
  replace kids = kids + 1 if v008 - `b' < 48
}I also discovered that in this survey, although v208 is labeled births in the last 5 years it actually
contains births in the last 4 years. You can verify this by comparing v208 to the kids variable as
follows:
tab v208 kidsSo thus you can use v208 for this survey.
