Hello,

On page 1 of the DHS 2013-14 Summary Report for DRC, the DHS Program notes that "The majority of indicators are representative at the national level, for urban and rural areas, and for each of the 11 provinces. Additionally, the majority of indicators are also representative for the 26 new provinces."

Is there a definitive listing anywhere of which variables in the DRC 2013-14 DHS are representative at which levels/ for which province demarkations? I would like to run analyses with survey weights that are provincially representative at the new province level (aka: for 26 provinces) and have been unable to find this information on the DHS website or in the full French country report thus far.

Thank you very much for your help!
