Following is an additional response from DHS Senior Research Associate, Shireen Assaf:

The denominator of 1656 is correct. In Table 11.3 this is the number of youngest children under age 2 (10th column), the 1698 is the number of all children under age 2 (12 column or last column). For matching the predominant feeding and complimentary feeding please use the provided code which creates the feeding variable and recodes this variable to obtain predominant feeding.
