Hi All,

First time in the country, we are planning to combine DHS and Food Security indicators into the one survey. No idea about the limitations and constraints against what we have to be careful to ensure the success of the survey in the field work : what are the points that we have to highlight during the training to facilitate field work? How to proceed with the sampling methodology? The survey is at HH level and individual level, etc.?

Thanks in advance for your guidance :-)

Regards
AAL
