A response from Dr. Shireen Assaf:
Quote:
Hello,

The following code can be used for obtaining the concentration index with the erreygers correction assuming you have computed your outcome variable cpr (contraceptive use). Here I am showing this for the wealth index, the same should follow for the education variable.

gen wt= v005/1000000
conindex cpr [pw=wt], rankvar(v190) bounded limits(0 1) erreygers cluster(v001)

Thank you.
Best,
