Thanks for your response, and the clarification on the Uganda 2011 sample. For DRC 2007, I have now understood why there are 34 strata, but I am still not sure what to use as the "stratification variable" as v022 has no data in it and I can't find anything else that looks relevant for the three strata ville statutaire, cite, secteur/chefferie, and the four districts of Kinshasa. How do I correctly create a strata variable for the svyset command?
