Thanks, Liz, this is very helpful. I have another question for you: What variable in the recode file is used to determine whether the individual is a domestic servant (variable is used in factor analysis for urban, rural, and combined)? I did not see anything in the individual, household, nor household member recode files with this information. Also, do the variables "HOUSE" and "LAND" used in factor analysis correspond to variables V745a and V745b in the individual recode file?

Thanks,  
user-rhs
