Hi Liz,

Thanks to Claudia for the response.

Now my question is on linking 2007 Uganda SPA data.
My unit of analysis is health facility so I have merged ANC data to Provider using facilty number and ProviderID. I have then tried to merge the new data file to facility data using facility number. However, I get an error message "Duplicate key in a file. The BY variables do not uniquely identify each case on the indicated file. Please check the results carefully". I would like to know if there is something I did not do well and what that message means. Any other information on how I can merge the 3 datasets is welcome. I am using SPSS.

Thanks and Kind regards

Peninah
