
Subject: Individual Recode vs. Womens Recode

Hello! I am using DHS-VII for my analysis, and in all of the recode materials, it refers to women's and men's surveys, however for Tanzania's 2015-2016 data sets, there is only Individual Recode and Men's Recode. I am working with Individual, but the recode manual says that this includes men and women? I cannot find a variable for gender/sex, so how can I isolate only female responses? Are the women interviewed ever-married only? This was not clear to me.

Thank you!
Kira
