Thank you so much for the response. Yes, my survey indicator variable is 'year' which takes values 1999, 2004,...2014.

Here are the steps I have done in my code

```
* create sample weight variable
gen wgt=v005/1000000
* generate new psuid and stratumid variable for svy command
egen psuid=group(year v021)
egen stratumid=group(year v022)
* set svy command
svyset[pw=wgt],psu(psuid) strata(stratumid)
*Example regression
svy: reg y x v012 i.v190
```

Could you please have a look if this looks okay.

Best regards,
Baker
