Subject: Weights for regression analysis Posted by ale\_sovera on Sat, 11 Mar 2017 13:33:20 GMT View Forum Message <> Reply to Message

I am working with female and male individual datasets and I have read that I have to use the corresponding weights to do the tabulations of the variables contained. What I am wondering is if I am supposed to use weights also when doing regressions and more generally, when trying to do estimations.

Thanks
