Dear Kerry,

I appreciate your help here.

Just to clarify further on your reasoning, this is not the case with India DHS 2005-06. If there had been any '9's, then I would have coded differently and included only the '1's in my counting. Further proof that I am not dealing with any '9's is that the maximum count my variable 'ipv' has is 4 (range: 0-4).

I will request your assistance to get to the root of the problem.

Thanks
