Hello, I am working with Namibian DHS 2013. I want to make a logistic regression and produce Odds ratios. My two variables are "education level" (v106) and "comprehensive knowledge" (comp knowledge_score5). (The data is weighted) I tried the following code:

```
svy: logistic compknowledge_score5 i.v106 if gender == "women"
```

Is that code right?

As you can see in my output "no education" is not listed. If my syntax is correct, how can I interpret my output?

I am happy, if someone can help me!
