---

I am using the Pakistan DHS (2012-13) and trying to run an AREG model. Apparently the svyset command does not work with this. Is there an alternative command that would work. I can account for weights and the clustering but the stratum option only works with svyset as pointed out by Tom Pullum in this thread <http://userforum.dhsprogram.com/index.php?t=msg&th=4908&amp;goto=9278&S=Google>

If I choose to ignore the stratum stratification but accounted for the weights and clustering, would it impact my results? The AREG model is essential since I am including regional effects for the 471 psus in this dataset.

Any help would be appreciated.

Thank you.
