1) When I look at the NFHSIII dataset, I see values 1-73 for v022. The strata are urban slum and non-slum area and rural areas in each state. See table C.2 (Sample characteristics) in Volume II page 15 of the report.

2) For the svydesign the ids should be just the cluster level ids, not including the household id, so it should only be v021

Thus, I think the command should be:

```
df$sampleweights <- df$v005/1000000
```

```
design <- svydesign(ids=~v021, strata=~v025, weights=~sampleweights, data=df)
```
