- 1) When I look at the NFHSIII dataset, I see values 1-73 for v022. The strata are urban slum and non-slum area and rural areas in each state. See table C.2 (Sample characteristics) in Volume II page 15 of the report.
- 2) For the svydesign the ids should be just the cluster level ids, not including the household id, so it should only be v021

Thus, I think the command should be: df\$sampleweights <- df\$v005/1000000 design <- svydesign(ids=~v021, strata=~v025, weights=~sampleweights, data=df)
