---

Dear DHS Experts,

I would like to know what districts the sdist code in Pakistan DHS 2012-13 represents. The numbering is as follows:

There are 121 districts in this data ranging from the numbers:

101-227 (continuous)

301-325 (continuous)

402-430 (continuous)

501-507 (continuous)

and 601

I would like to know if there is a way to identify what districts these codes represent or what method this numbering is following, since I want to create some district specific variables in other datasets and combine it with this data.

So far I have identified that the first number in the sdist code (1, 2, 3, 4, 5, 6) represents the province in which this district is but I cannot determine the rest.

Your help will be invaluable to me,

Thank you,

Nayab.
